MOSQUITOES ARE OUT IN FULL FORCE!
WHAT CAN YOU DO RIGHT NOW TO HELP PREVENT MOSQUITOES AND THE DISEASES THEY CAN CARRY?

DUMP AND DRAIN ALL STANDING WATER AROUND YOUR HOME.

Facts:
• It only takes a tablespoon of water for mosquitoes to develop.
• Once eggs are laid on water, mosquitoes develop into adults on an average of 7 days.
• Female mosquitoes bite several times during their lifespan, using blood as protein for their eggs.
• Mosquitoes acquire West Nile virus when biting infected birds and then spread the virus by biting humans.

Be sure your window and door screens are in good condition.

Insect repellent helps to reduce mosquito bites. Wear EPA-registered insect repellents containing DEET, picaridin, IR3535 or oil of lemon eucalyptus.

Report neglected swimming pools to the San Joaquin Country Mosquito and Vector Control District

Call the District for additional information or to request service at no charge, (209) 982-4675
